

ABSTRACT

REDESIGN OF HUSEIN SASTRANEGARA AIRPORT DOMESTIC TERMINAL WITH FLEXIBLE AND MODULAR DESIGN APPROACH

Abstract : The interior design of Husein Sastranegara Airport Domestic Terminal in Bandung plays an important role in creating an efficient and comfortable user experience. This study aims to redesign the airport interior with an approach that integrates local Bandung cultural elements and modular and flexible design concepts. The main focus of this design is to create a space that can adapt to user needs and airport developments, through the use of design elements that are easy to adapt and renew. In addition, this design also prioritizes improving facilities, better air circulation, and an intuitive navigation system to make it easier for users to do activities in the airport area. By carrying the concept of local culture, this design is expected to not only create a comfortable atmosphere but also reflect Bandung's identity as a city rich in history and culture. Through this design, it is hoped that Husein Sastranegara Airport can offer a better experience, reduce user confusion, and create flexible space for various functional needs in the future.
