PREFACE

The author expresses gratitude and praise to Allah S.W.T. for all His grace, blessing, and guidance for this thesis titled "Improving Drug Target Affinity Prediction using Dynamic Graph Attention Network with Multi-scales Features and Attention Mechanism" which can be completed on time. This thesis was done as a prerequisite for obtaining a Master of Informatics degree at the School of Computing, Telkom University. This thesis also contributes to the field of computer science and bioinformatics.

In thesis writing, The author faces many challenges and obstacles, such as time spent searching for relevant journals, time-consuming data processing, doing a lot of trial and error to achieve the best results, and losing motivation and enthusiasm sometimes. The most difficult part to write about is the findings topics and problems that are written in Chapter One. As the saying goes, the hardest part of any endeavor is getting started.. nevertheless, the author managed to complete the writing of this thesis.

However, the authors realize this is far from perfect, still has shortcomings, and could be improved. apart from that, this thesis completion is part of the support, direction, and guidance provided by many parties. Therefore, the author extends his deepest gratitude to all those who have contributed, both directly and indirectly.

Bandung,

MUHAMMAD RIZKY YUSFIAN YUSUF
