

LIST OF FIGURES

1.1	The challenges and applications of FRMCS in several areas.	2
2.1	Tentative roadmap to the FRMCS V3 edition.	7
2.2	The frequency of GSM-R and FRMCS.	10
2.3	Constellation of single layer $N = 3$ resulting $F_r = 1/3$	17
2.4	Representation of the radio link budget factors.	18
2.5	Definition of cell radius (d_{2d}) for O2O scheme.	20
2.6	The web-based TASFRI online platform.	25
3.1	The railway network across the island of Java.	28
4.1	The current condition of the 900 MHz frequency spectrum allocation in Indonesia.	39
4.2	Spectrum allocation of 1900 MHz in Indonesia.	40
4.3	Estimated spectrum fee of 1900MHz based on license type.	42
4.4	Spectrum utilization efficiency at different cell radius and cluster size.	43
4.5	Example of reuse distance calculation for R=2.60 km.	44
4.6	Spectrum mapping in the migration to FRMCS in Europe.	45
4.7	The comparison of path loss over distance at 1905 MHz.	46
4.8	Sensitivity parameter on RMa-UL method using apparatus license. .	51
