

ABSTRACT

AWH (AndroWebHost) Mini Café is a service from PT Adhikari Innovation Indonesia which offers a variety of drinks and fast food, as well as services Photobooth in various cities on the island of Java. With the growth of sales activities in outlets, events and services Photobooth, it is important to manage finances in a more organized way. Currently, petty cash management is still carried out via Microsoft Excel and input every month using the Mekari Jurnal application. However, the report produced combines large cash and petty cash, so that information regarding AWH Mini Cafe and Photobooth cannot yet be presented in detail. Therefore, a more computerized system is needed to support the finance team in creating petty cash journals and reports. This application was developed using the Laravel framework, PHP as the programming language, and MySQL as the database. This system is designed to help the finance team recap financial transactions in a more structured manner.

Keywords: Petty Cash, Transaction Journal, AWH Mini Cafe, Laravel, MySQL.
