

ABSTRACT

The design of an effective user interface (UI) plays a crucial role in enhancing both the efficiency and user satisfaction of a Human Resource Management (HRM) system. This final project aims to develop a modern, intuitive, and responsive UI for the HRM system at Rastek.ID. The interface focuses on key HR functionalities, including leave management, attendance tracking, and employee data management. The design methodology employed is User-Centered Design (UCD), ensuring that the interface aligns closely with user needs and expectations. The outcome of this project is a responsive and user-friendly interface with a clean, modern aesthetic that follows current design trends. Usability testing was conducted using the System Usability Scale (SUS) to evaluate the system's ease of use. The results indicated a notable improvement in usability and overall user satisfaction.

Keywords : User Interface (UI), Human Resource Management (HRM), User-Centered Design (UCD), Usability.
