

NEW DESIGN OF AL-MUHAJIRIN ISLAMIC BOARDING SCHOOL IN BANDUNG WITH A WELL-BEING APPROACH

ABSTARCT

Islamic boarding schools are religious and Islamic institutions that emphasize religious and moral knowledge, and have an important role in producing a young generation with noble character. The increase in the number of students and junior high school students shows the relevance of pesantren in society, but the inequality of educational facilities and mental health problems of students are challenges. Al-Muhajirin Foundation with its vision of creating a superior community of people seeks to overcome this challenge through the construction of a new campus. However, observations show a lack of substandard facilities and problems with learning comfort in the central pesantren. Interior design with a well-being approach is a solution to create a healthier, more comfortable learning environment that supports student development. This approach pays attention to aspects of spatial planning, lighting, ventilation, inclusivity, communal areas, and the use of appropriate colors and materials.
