

Abstract :

The new design of Hotel AlZeto Co-Living Sunset, a three-star establishment located in Bali, accepts a biophilic design philosophy aimed at creating a contemporary, healthy, and environmentally sustainable living environment within an urban backdrop. This initiative is driven by the increasing influx of tourists and digital nomads to Bali, the growing popularity of eco-conscious accommodations, and the rising need for communal spaces that promote productivity and social engagement. Major obstacles faced include limited natural vistas, ambient urban noise, and inefficient public space configurations. The design process incorporated comprehensive literature review, site analysis, competitive benchmarking, and adherence to three-star hotel design standards. The strategies employed focus on optimizing natural daylight, enhancing airflow through natural ventilation, incorporating greenery, using eco-friendly materials, and managing acoustics effectively. Eventually, the project aims to deliver a co-living hotel that not only fulfills practical requirements but also promotes the physical and mental well-being of its occupants, serving as a benchmark for sustainable hospitality in support of Bali's burgeoning tourism industry.

Key Word : Biophilic, Hotel, Co-Living, Bali
