ABSTRACT

The Right and fast in seriously to get Information is very important for telecommunication service process especially at STT Telkom. To get the Information about the right network, user must to see the maps usually on the letters that pieces with data, but in this case still doing of manual and to information service about telephone network is too slowly. From this case this things are important of needed to get information that we can get with to compare the Geografis maps until are of them make relations and the end can serve the right information with fast and true.

In this scription, we make the GIS software that serve the information in grafis form with use the geografis map interface. In this case will speak about to manage telephone network at STT Telkom that fluently we know the network manage at STT Telkom is minus from the replacement. To use this SIG will hope to make easy for the service until can helped to optimize the manage process, and the analize of data statistic for the plans.
