

Abstract

The speedy development and the benefit of information technology extensively required the government to use the development of information technology for developing the skill of processing and distributing information for public service. In confront that demand the government release National Information System programme (SISFONAS) which are expecting can be the solution for planning, calculating and supervising efforts so that can be realize the government with Good Governance character. But in fact, there are so many problems in reaching SISFONAS which expecting can be realize ini 2010. That problem are appearing of information island, data inconsistency and information, that can make the difficulty of integration system.

In this paper, be made the proposal of standardization website content of Region Government and National Framework, which expecting can be the suggestion for government solve problems in implementation SISFONAS. The result is the proposal standarization website content of Region Government which suitable with necessity of SISFONAS and the proposal of National Framework which is made the implementation of SISFONAS more resemble and integrate, so that the development overlap in region, Propinse and Central Government can be avoid.
