

ABSTRACT

The role of information systems and information technology (IS/IT) in an organization is very important to support business processes become more effective and efficient so that can improve the quality of services and facilitate organizations in designing the work plan. Implementation of IS/IT in BBWSC-3 as a case study of this thesis was still not optimal, especially in the reporting many work process from each field / section within the organization. This is due to lack of support IS/IT in the reporting process.

The strategic planning IS/IT is started with library research and data collection on issues that related to the process of reporting on BBWSC-3. After that, the data were analyzed and then made a reference in the strategic planning of IS/IT use TOGAF ADM framework. After that, testing the quality of planning results using EA Score Card.

The results of the strategic planning of IS/IT is expected to produce a blueprint that will be used by BBWSC-3 as a guide to the organization's governance reporting process in the future.
