

## **ABSTRACT**

SMP Negeri 1 Kartasura a school has a predicate School National Standard (SNS). However this school that do not have information system and website. When the reception of new students, SMP Negeri 1 Kartasura is a favorite of school compared with the other.

Information system that is designed school web sites, the application score of the students, and attendance application. Data to be published in the website is data about the school, including school profiles, teacher data, personnel data, student data, the value of students each semester. This site will feature in the visualization of the facilities in the SMP Negeri 1 Kartasura. Design of information systems have several phases, including phase analysis system is now and needs survey. The next stage is designing the system, preparation of hardware and software for computer servers, and the realization of the system. The last stage is testing the system, system implementation, and evaluation system

The results achieved in this project is to design information system of SMP Negeri 1 Kartasura with information visualization and school facilities that user friendly and equipped with the application and score of student attendance. In the test focuses on the response time, speed, and processor load

Keywords: information systems, score, web
