

ABSTRACT

Short Message Service (SMS) is one of services of the fixed and mobile telecommunication system, that text message was sending between user on the SMS network. SMS Gateway are component hardware and software can permits any SMS applications, text or multimedia for communications with SMS Center Operator (e.g Telkom, Telkomsel, XL, Indosat, etc). SMS Gateway communicated with SMS Center Operator for deliver any content service from content provider into user, for example content service, valuta, business, and politics. In politics, for getting information of vote like quick count, using some of variables for voting.

Real Count is system can show the result voting of “Pemilihan Umum(Pemilu)” without using sample for voting, show the meaning is Real Count showing the result based on all of member of voters to doing voting.

Implementations of validation card number, can give result real count application more accurate, the card number is unique, that’s different with any number else, beside that, system will compare the datas are saved in the databases with the datas are enter in the systems, so can minimalizes the jail in the real count voting.
