ABSTRACT

The development of organization or institution should followed by its communication media and operational requirement. The institution such as Lembaga Infak Zakat Shodaqoh (LAZIS) must need a communication media for its user to send feedback to improve institution's user confidence. Whereas media operational needed as a tool to make an easier works and efficiencies.

This project created an application for LAZIS media operational based on web application. Application made by HTML languages, PHP, and MySQL as the database function. This application arranged to create the daily operational of LAZIS easier. This application create based case study the needs of LAZIS Syamsul 'Ulum IT Telkom.

Application test was done by looking for the success of application that has no error. It used to examine so it will be good in use. Server build was tested by its performance for any different condition of user access. Test result shown use of server and media operational application inside has capability to handle 100-200 user at the same time for an optimal results.

Key Words : LAZIS Operational Aplication, WEB Aplication, Server Capability
