

Immigration Office (Kanim) is the technical implementation unit that runs the Immigration Functions in the district, city, or district. An Immigration Office manage an one district or more. Kanim Kotabumi built to expand the service functions of the Directorate General of Immigration in Lampung Province. This Kanim serves the local area and surrounding communities in the manufacture, replacement, and extension of passport and visa. Now, service on Kanim Kotabumi is manually, from submission of application until the passport is done.

So that, need to be made an Information System of Immigration Kotabumi Lampung Office based on web that offered as a solution to facilitate in terms of setting information data and stored in the database.

The result of this project is an information System based on web that enable to access information easily and more quickly in application process. Efficiency of time improved the service of applicants. Besides that, it also know the information about the Directorate General of Immigration to gain knowledge.
