

## ABSTRACT

Student is anything related to student activities on campus. Whether it's the nature of academic and non-academic. In a campus institution, which is set in nearly all student activities are part Kemahasiswaan (BK). To organize and serve the needs of the students to the maximum, BK has created a website that aims to make the performance can be done more effectively and efficiently. But the performance of existing website is still up, because there are many systems in practice is still done manually.

To achieve the initial goal of maximizing the performance of the website, it takes a lot of reforms in almost every part of exist. To change the old system into a new system, of course, necessary data is available on the old system or existing system to be analyzed further in advance, what parts are being converted to the new system online.

After analysis of the old system to be changed, then at the end of this project made a change in the system if the old system is still manual in pelaksanaannya, transformed into almost all of the existing system has become a new online system. As in the first hostel booking system is still manual, students can reserve a room now online. Then the system of scholarships, the new system has become more efisien when compared with the old system is still mostly done manually. For the clinic system, students can now register first if will seek treatment, and more clinic admins find it helpful to patients and diagnostic data collection system that has been transformed into a new system online. And now student achievement can be more proud of the accomplishments that have been achieved, because the new yang system, each of these achievements will be featured on the website. Last for the system on the news, is now more organized according to the type of news.
