

ABSTRACT

Technological developments and current information on highly developed, especially the development of media technology information. One such technology is the application of information media based Android operating system. With these operating systems can be incorporated to support applications for the dissemination of information, then one important application is the application of information education on adolescent sexual health.

This application is designed as attractive as possible in order to be used by teenagers especially those with a mobile phone with Android operating system. This application is continued from an existing website that is Sex Education For Health (SEFH) to support the application on the Android operating system. Besides the view from the existing data, the level of promiscuity and the spread of diseases caused by it, such as AIDS from year to year increase. That is because lack of knowledge about sexual health education information and also the lack of media interaction with adolescent sexual health experts. Within this application there is information that originates from an organization that is trusted, the media for consultation with experts and organizations related to sexual health education.

The results of this project android application is to provide convenience to the users, especially among teenagers to be more informed by the media instant messaging and the latest articles on sexual health education / reproductive right, right. From the survey, 74% of users indicate that the application is important and 55% user indicates the application is easy to use. This application can be used at least in android version 2.2 with the application name is SEFH.
