

## **ABSTRACT**

*In accordance Laws of the Republic of Indonesia Number 19 Year 2002, the visual arts such as photography and graphic design has a value of its own copyright so the work is protected by law. Basically it should work according visual function that is to be displayed and enjoyed by the public. When the display is not uncommon for people who are interested in and then intend to use it in certain purposes such as media campaigns, publications, and so on, so this is where the visible benefits of exhibiting or showing visual arts to the public. Due to the lack of container to exhibit and demonstrate visual arts to the public, so many owners of visual arts exhibited his work through blogs or social media, but the mainstream media as it is vulnerable to acts of copyright infringement.*

*With the development of technology and the problems that occur, the final project is the application of web-based portfolio of visual arts that allows the owners of visual arts such as photographers and graphic designers can each exhibit his work without having to worry about copyright infringement. Making an application portfolio of visual arts using Codeigniter PHP framework as a web programming language and MySQL as the database server.*

*After testing and implementation of some of the conclusions obtained are: application portfolio is useful as a work of visual media in the form of mutual visual showcasing photography and graphic design with the advanced protection concept with some of the technical work is applied. Based on the results of subjective tests revealed that web applications portfolio of visual arts is considered easy to use because it has features that are simple but quite good as the media gallery application portfolio with an efficient protection concept.*

*Keywords: portfolio, visual arts, copyright, Codeigniter, MySQL.*
