ABSTRACT

This final project creates information service application of bus ticket based on the SMS that will be present the information about the availability of ticket at the head office of Maju Lancar Bus in Yogyakarta. Agent does not need handy talky again to order or to know the information of the ticket availability. Agent will be given an agent ID to request the ordering of ticket through SMS and to know the information of the ticket availability (seat).

This application not only gives the information of the ticket availability (seat), but this application also gives the information about agents that becoming branch of Maju Lancar Bus. Administration workers (operator) have username and password which are used to access this application. Information service application of bus ticket is implemented at the head office of Maju Lancar Bus, so that the application just addressed to the head office of Maju Lancar Bus, while users which could have benefit from this service are agent. So the users in this application are operator, administration worker and Maju Lancar Bus agents.
