

ABSTRACT

Some of Otobus company provide service for ticket reservation with divide it in Communication systems between agency. However in implementation still use telephone facility or Handy Talkie. Because of that, a company surely need a system that can facilitate ticket reservation between agency to decrease many possibilities from human mistakes.

This system that used of agency staff was not applying for customer. This Final Project System designed with Client-Server Structure for ticket reservation. In order to provide system for any Otobus company. Because of that, This final Project was develop based on web. Because Web is effective for distributing Communication systems. This Final Project used with agency for serving ticket reservation between agency in a certain reservation zone.

Keyword: Central Agency, Branch Agency, Ticket Reservation
