Abstract

Nowadays, technology is obviously needed to help a company in order to perform daily operational activities. It start from item producing and processing item database at warehouse that usually known as warehousing, selling items to the customers, until activity which deal with employment. Therefore, an application is surely needed to help the company to perform it.

The purpose of this Final Project is to make a software or an application based on web which can facilitate the Unkl347 Clothing Company in managing and processing items database, selling items to the customers, until activity which deal with employment. The database is build by using My SQL, PHP and Java Scripts for the programming language, Macromedia Dreamweaver as its editor, Microsoft Visio and Power Designer for the system model's, and Adobe Photoshop for the design of interface.

This application can handle inserting, updating and deleting items and amployees data, inserting selling transaction data, arranging report, saving data in large amount, such as selling transaction data, without error. It can manage employee's activity such as absency, salary calculation and holiday time proffering and approval letter.

Keywords: **application, warehousing, selling, employment, MySQL, PHP**
