

ABSTRACT

PO. Harta Sanjaya is one of Transport Company which want to increasing performance of the work especially at sale and ticket ordering that also concern with user or customer's situation.

In the globalization era, communication and this device develop rapidly. One of the facts is the presence of SMS (Short Message Service) feature at mobile phone. SMS utilization is very familiar and very interested for people. They can communicate with another, getting information, and etc through this SMS feature with spend cost that cheap relatively and the easy method to do its. Therefore, "A Sale and Ticket Order Application Based on SMS" has been built in this Final Project. This application will be used to help the company to maintain sale and ticket order system, and also give the customer information about availability of bus adjust of their destination with easy way to access this information.

This application will be build with Object Oriented Design and Analysis Method. Implementation process of application use Java 2 Standard Edition language.

Keyword : sms, java, sale, ticket ordering
