

ABSTRACT

PT Sidohita Electric TRD CO, who was in the area of Medan, North Sumatra is a company engaged in construction electricity network has a fairly complex business processes in the processing of data. Until now, such data processing still using manual system that has not been computerized and data storage are still scattered and not well documented, Where in the data processing still using Microsoft Excel and Microsoft Word and do not already have a database as media of data storage, and still to be a hardcopy printout.

Therefore the final project entitled "Web-based Information System of Project Management on PT Sidohita Electric TRD Co. Medan", is a media which deals with processing and storage of such data that is processing the employee data, project data, equipment data processing and reports as well as other components that support to this web applications.

The final project is built using the waterfall method, and implemented using the PHP programming language, while for the database use MySQL.
