Abstract

Lembaga Pelatihan Kerja (LPK) Prima Husada Purwokerto as one of the best training course with complete facilities and 200 students each year. But, even though Prima Husada is the most well known training course, they are not supported by marketing and publication technology, and computerization system that able to manage the data and display the information quickly and accurately.

The solution from LPK Prima Husada problems are the goal from this final project. This base on the web system was developed by using waterfall system design method and PHP+MySQL to build the application. This web brings many functionalist features that make sending the news and information in online way easier for LPK Prima Husada so the students will receive the information that they need quickly.
