

ABSTRACT

Unit Kegiatan Mahasiswa Sulawesi or usually called UKMS is one of cultural organization on the IT Telkom campus. Since its formation the staff of UKMS manually has managed the data like the data keeping by saving it in excel file, meanwhile data manipulation about member and alumni have never been updated. Seeing the development of this organization and aslo the development of Internet technology today, UKMS IT Telkom needed a dynamic website in order to convey information quickly and accurately, as well as application management and data storage that can be accessed from anywhere and anytime. This dynamic website will be made with waterfall method and using PHP,MySQL database and other supporting software.

Key words : *Web dinamis, UKMS IT Telkom, Waterfall, PHP, Database MySQL,*
