

ABSTRACT

Payroll and Personnel System is operational from the Human Resources Management in PT.INHUTANI II South Jakarta that managed by the personnel. However, the system is still done manually, so that was very difficult and requires hard work in the personnel to records of employee data and preparation of payroll reports at the end of the month. In addition, employee data management system and payroll done manually will require huge costs and quality of work that is less efficient.

Therefore, with the Application of Payroll and Employee, are expected to help the personnel of PT.INHUTANI II South Jakarta in administrative processes such as managing data and the salaries of the employees and the preparation of the consolidated salary / wages of employees.

The functionality contained in this website-based applications such as: employee data management, position management, department management, group management, employee payroll management, benefits management, piece management, displaying report of employee data and salaries and data search. By leveraging technology, client-server networks, this application will be accessible by all employees of computer that connected in a Local Area Network (LAN) with different access rights.
