

ABSTRACT

Information System of Officialdom is one the important operations in Badan Kepegawaian Daerah Kota Bandung. However, the current operation is being handled by manual systems. So often it is difficult for employees BKD Admin section if you want to recapitalize employee data or if you want to enter the scoring. This led to the disintegration of the data that is often less effective and efficient, especially in terms of time and effort.

Therefore, Badan Kepegawaian Daerah requires information systems that can assist in the management of Data Information Officer. Staffing information system was created in hopes of helping Staff Officer in charge of personnel to manage the data. Moreover, it can provide information about the data recap, scoring DP3 and staffing to the users who need the information.

Information Systems of Officialdom at Badan Kepegawaian Daerah Kota Bandung was built by implementing the concept of MVC so hopefully easier in further development. The information system was built using the programming language PHP with CodeIgniter framework and MySQL database as the database.
