

ABSTRACT

Cipaganti Travel is one of the companies which provided the transportation services in Indonesia. Built since 1991, Cipaganti Travel developed fastly at 2006 and already has many branches throughout Indonesia. One branch of the Cipaganti Travel is Cipaganti Travel Cirebon. Cipaganti Travel Cirebon built in Cirebon City in 2007. As an one branch of Cipaganti Travel, Cipaganti Travel Cirebon also handled many transactions of all transportation services everyday. Thus, it is needs report transactions which records all transaction data of transportation services at Cipaganti Travel Cirebon.

At the report transactions in Cipaganti Travel Cirebon, it is still has a problem in the process of formulation. Therefore, we will designed an application that can help the process of formulation and displaying transaction data of transportation services at Cipaganti Travel Cirebon everyday. The report transactions application can be constructed by several methods, one of them is using the MVC design pattern. MVC (Model View Controller) is a programming concept that separated between the programming logical application and that presentation. Program codes that follows the concept of MVC will be easier to maintenance and to developed in the future.

Based on that all things, we will build the report transactions application that can displaying all of transactions data everyday then it will making manager easier to monitoring all achievement targets in each branch and to find out the developing of using the transportation services at Cipaganti Travel Cirebon. The report transactions application will implemented the MVC concept so it is can make easier to develop in the future. This application will build by using PHP programming language, CodeIgniter framework, MySQL database and other support software.

Keywords: *Report Transactions Application, Model, View, Controller.*
