

ABSTRACT

Taman Mini Indonesia Indah is an educative recreational area with Indonesian culture as the main theme of the park. Information centers plays important role for tourists to going around in the 150 hectares park areas. A special purposed system to organized, presenting facilities and events information may become a good solution for tourist guide. Besides giving latest information about TMII, this system also helps Pusat Informasi dan Budaya –the TMII Information department, to manage their events and facilities data. The “Taman Mini Indonesia Indah Tourist Guide” final project intention is to create an application which is capable to manage and presenting information. Using an interactive map, this application gives details of facilities and events that held in TMII. The project however, hopefully becomes guidance for tourists who visit to TMII. Taman Mini Indonesia Indah Tourist Guide is a web-based application implemented with PHP and MySQL database, Flash and other required technology.
