ABSTRACT

To improving and developing an existing activities in order to make Tutoring E.L.S not only good for everyone in education world, but also both in terms of internal organization (between the owners and all staffs). It takes an application that can handle the PayRoll system well, fairly, and right.

Final Project titled "PayRoll Sistem Application in Tutoring E.L.S" has the ability to handle the complexity of the problems in terms of PayRoll in a tutoring, as well as how to pay each teacher fairly according to the remuneration policies in E.L.S, the difference in the number of student to each teacher, the difference in the cost of tutoring per student, student and teacher attendance (which is not necessarily 100% every month), if the teachers don't come, then there is an exchange between teachers' schedules, whether the teacher is able to change their schedule, what if they can't, addition of holiday in the middle of the week, the PayRoll system that still ancient, students requested a schedule change, how if tutoring can't fulfill their requests, and another unexpected problems. Besides this application also take advantage of computer technology, power java programming, and easiness in handling databases by MySQL that will surely speed up all the existing calculations, and to improve the precision and accuracy.

PayRoll System Application in Tutoring E.L.S was made, in the hope of completing all sorts of payroll problems that had occurred in Tutoring E.L.S.
