ABSTRACT

Canada course is one of most favourite English course for students to improve their English skills. To support a better system, Canada Course needs an application to facilitate scheduling for each students. Beside that, this application help students view course schedules and their English level.

In this final project, scheduling application built in Canada Course which is supported by the SMS gateway. There are several features in this application, the admin can manage student data and data tutors, to know the results of placement test, to know the result of scheduling, print the report and displaying graphics from *database*. Whereas the features for teaching are the tutors can create an account, and can be editing the data by themselves if one day the data themselves tutors changed. And for the students, they are can register as a participant.
