Abstract

Tutoring Agency Education Laboratory (Edulab) is tutoring agency that combine the psychological and academic aspects. Edulab always guided his students to find educational purposes in accordance with the interests and talents and learning form the character as a preparation for further education.

Academic aspects are developed in a way always supervisestudent results by conducting a trial test / tryout to evaluate student results on a regular basis. Edulab held a try out test to the students as much as once a week during the intensive learningperiod before the exam SNMPTN.

The supervision of try out the current results still manual. Any evaluation of student learning results just by looking at the students's score tables only. Students who have selected courses PTN manually compare the results of the student tryout with the standards of graduation / passing course grade. With the system still manual, students are not able to measure the comparative outcomes of students with a passing grade try out courses in the numbers and see the development of students' learning system in preparing for examinations SNMPTN actually, so it appears the problem as the students get the try out with a way to manually record announcement on the bulletin board without the inclusion of the percentage success rate of students to enter the state university courses of their interest.

Manufacture of this application aims to facilitate students in gaining percentage success rate of students to enter the state university courses of their interest.

Keywords: Edulab, monitoring, SNMPTN, *try out*, *passing grade*.
