

ABSTRACT

In this rapid technological era, there is so many sectors in life which cant't be separated from the roles and function of technology, especially in the field of information. Health care and services require both speed and accuracy, considering these two things, information and technology should be used to support medical services toward society.

Medical Application Control is an android-based application. The expected output of this application are the data regarding patient information, medical records, post-diagnosis status and control towards patient in the treatment period can be readily noticed by the patient, relatives, and medical team. Therefore, relatives can acces and control current information, what the doctors probably do with ease and can be done everywhere.
